

Benjamin Delshad

Backend Software Engineer (Kotlin · Java)

Frankfurt am Main, Germany · benjamin@delshad.dev · delshad.dev
linkedin.com/in/benyamindelshad · German permanent residence (unrestricted work authorization)

Backend engineer with **4+ years of professional Java and Kotlin experience** building microservices with **Spring Boot, Kafka, and event-driven architecture**, guided by Domain-Driven Design, TDD, and continuous delivery. Strong computer-science foundation: research background in distributed systems and algorithms, top-10 rank at ACM-ICPC Asia Region. Industry experience across **e-commerce and ticketing, energy, and logistics**.

CORE SKILLS

Languages	Kotlin, Java, Python, SQL, Bash, C/C++
Backend	Spring Boot, REST APIs, microservices, event-driven architecture, Apache Kafka, Avro + Confluent Schema Registry
Data	PostgreSQL, Oracle DB, Flyway migrations, JPA/Hibernate
Infra & Ops	Kubernetes, Docker/Podman, Terraform, GitLab CI/CD, Grafana, Confluent Cloud, AWS S3
Practices	Domain-Driven Design, hexagonal architecture, Clean Code, TDD (JUnit, Kotest, MockK, Testcontainers), Scrum, pair programming, code review

WORK EXPERIENCE

Software Engineer, Platform Integration (Yatta Checkout product)

07/2026 – present

Yatta Solutions GmbH · Frankfurt am Main. Yatta Checkout is Yatta's own e-commerce platform for digital goods, covering payment, fulfillment, and delivery.

- Design and build the **delivery domain** of the platform: a greenfield, **event-driven pipeline** (Kotlin, Spring Boot) that turns completed purchases into fulfilled digital products.
- Introduced the service's **first Kafka producer**: authored the Avro event schema and topic and configured the producer for reliable, duplicate-free publishing, decoupling processing steps across bounded contexts.
- Apply **Domain-Driven Design and hexagonal architecture**: drove a package-by-feature restructure and added an anti-corruption layer so features can be extracted into standalone microservices.
- Hardened the service for production with HTTP client timeouts that keep slow dependencies from stalling Kafka consumers, clear separation of retryable and non-retryable failures, and dead-letter-queue and idempotency design.
- Deliver test-first with Kotest and MockK plus full local end-to-end verification; owned the cross-team **Terraform** hand-off for Kafka topics and access control.

Stack: Kotlin, Spring Boot, Apache Kafka, Avro, PostgreSQL, Flyway, Kubernetes, Terraform, Confluent Cloud, AWS S3, Gradle

Software Engineer, SMA Solar Technology project (energy domain)

12/2023 – 06/2026

Yatta Solutions GmbH (consulting division) · Frankfurt am Main. Client project for SMA, a leading solar-inverter manufacturer.

- Developed an **EEBUS protocol driver in Java** to process grid-based power-limitation requests, ensuring compliance with German energy regulations (§ 14a EnWG, § 9 EEG).
- Built core **energy-management services and APIs** in a cross-functional team, optimizing end-user energy consumption and costs.
- Architected **GitLab CI/CD pipelines** automating builds, code formatting, static analysis, and test coverage.
- Sustained **80%+ customer satisfaction (NPS)** over two and a half years of iterative delivery in a Scrum team.

Stack: Java, REST APIs, Python, Bash, TypeScript, GitLab CI

Software Engineer, Rhenus Logistics project (logistics domain)

04/2022 – 11/2023

Yatta Solutions GmbH (consulting division) · Frankfurt am Main. Client project for Rhenus, one of Europe's largest logistics providers.

- Cut shipment-processing overhead with an automated **compliance system that proactively blocks high-risk shipments** to sensitive destinations.
- Engineered a **Spring Boot REST service providing end users with real-time shipment quotes**.
- Achieved **80%+ customer satisfaction (NPS)**.

Stack: Java, Spring Boot, REST APIs, JavaScript, Oracle DB

Doctoral Researcher & Teaching Assistant

10/2020 – 03/2022

University of St. Gallen · Switzerland

- Accelerated distributed-systems development by designing a **domain-specific language that automates operation-level consistency inference** (Java, NoSQL, JML).
- Taught in courses on engineering software systems, software engineering, and programming for data science.

Research Intern (M.Sc. thesis), Game Theory & Simulation

02/2020 – 09/2020

Institute of Science and Technology Austria (ISTA) · Klosterneuburg. Supervised by Prof. Krishnendu Chatterjee.

- Validated theoretical research by building **evolutionary game-theory simulations** to analyze probabilistic cooperation strategies (MATLAB).

Research Intern, Graph Algorithms for Transit Routing

04/2019 – 09/2019

IRIF (Institute on the Foundations of Computer Science) · Paris

- Modeled **public-transit networks as temporal graphs** and designed algorithms to assess infrastructure changes using real-world datasets (C/C++).

EDUCATION

M.Sc. Computer Science, Université Paris Cité (MPRI)

09/2018 – 09/2020

Paris, France. Merit-based scholarship; research-track master's (Master Parisien de Recherche en Informatique).

B.Sc. Computer Science, University of Tehran

09/2014 – 08/2018

Ranked 8th, ACM-ICPC Asia Region (2016) · two-time bronze medalist, Iranian National Mathematics Competition (2016, 2017) · teaching assistant for algorithms, graph theory, and programming courses.
